

NGÔ THÁI HOÀN

BACKEND DEVELOPER | C# • ASP.NET CORE

Ho Chi Minh City • +84 916 491 863 • ngothaihoan1103@gmail.com • github.com/thaihoandev

Backend Developer with 1+ year of experience designing scalable APIs and real-time systems in C# and ASP.NET Core. Specialized in AIoT platforms - telemetry processing, device orchestration, and video streaming - applying Clean Architecture, CQRS, and event-driven design to build reliable, high-throughput backend systems. Experienced across Azure IoT Hub pipelines, Redis-backed distributed state, and low-latency streaming infrastructure, with a track record of diagnosing complex issues end-to-end, from the API layer down to firmware-level behavior.

TECHNICAL SKILLS

Languages:	C# (Expert), Java, JavaScript
Frameworks:	ASP.NET Core (.NET 10), MediatR, EF Core, Spring Boot, ReactJS
Databases & Messaging:	PostgreSQL, MySQL, Redis, Kafka, Azure EventHub/Service Bus, MQTT
Cloud & IoT:	Azure IoT Hub, Azure Blob Storage, Streaming Protocols, MediaMTX
Architecture & Tools:	Clean Architecture, CQRS, JWT/RBAC, Docker, Nginx, Git

PROFESSIONAL EXPERIENCE

Backend Developer

Nov 2025 – Present

Mebisoft JSC | Ho Chi Minh City

- Contributed to MebiOne, a full-stack IoT aquaculture platform (ASP.NET Core 8, Clean Architecture/CQRS, PostgreSQL) - 70+ REST APIs with JWT/RBAC authorization.
- Built an Azure IoT Hub pipeline for device control and telemetry - dispatching commands via Direct Methods and consuming 40K+ telemetry events/day - with Redis-backed state and 7+ BackgroundService workers using Redis distributed locks.
- Engineered a low-latency video pipeline (RTSP - MediaMTX - HLS/WebRTC) supporting 70+ concurrent cameras with zero packet loss.
- Integrated AI recognition APIs (license plate OCR, material classification, weight-display OCR) into a vehicle gate check system, automating in/out weighing verification with confidence-based manual fallback.
- Built the warehouse management module for receiving, dispatch, and stocktaking with cost allocation.
- Collaborate within a cross-functional team operating under the Agile model, participating in sprint planning, code reviews, and technical design discussions within a bi-weekly release cycle.

Backend Developer Intern

Aug 2025 – Nov 2025

Viettel Post | Ho Chi Minh City

- Developed 8+ RESTful APIs for logistics and warehouse management workflows.
- Integrated iGas and MISA to automate e-invoice generation and submission.
- Built an asynchronous Celery + message broker pipeline, reducing invoice processing time.
- Implemented web scraping and structured parsing for invoices across inconsistent templates.
- Collaborated with QA/Product on requirements, test cases, and integration validation.
- Gained hands-on experience with production logistics systems, API design, debugging, and asynchronous processing.

PROJECTS & LEARNING

KKUN Quiz Platform - Personal Project

Jun 2025 – Sep 2025

Github

- Designed an event-driven quiz engine using Kafka to broadcast live questions and stream answer submissions in real time, decoupling question delivery from answer processing for reliable scaling under concurrent quiz sessions.
- Optimized leaderboard and session performance with Redis caching, cutting database queries and keeping score updates responsive under load.
- Built WebSocket-based live communication to synchronize question delivery and score tracking across all connected clients with sub-second latency.
- Delivered secure, JWT-authenticated REST APIs paired with a React frontend, powering real-time score updates and interactive quiz gameplay end-to-end.

EDUCATION

HCMC University of Technology

Oct 2025

Bachelor of Software Engineering

- GPA: 3.3/4.0
