

NGÔ THÁI HOÀN

BACKEND DEVELOPER | C# • ASP.NET CORE

Ho Chi Minh City • +84 916 491 863 • ngothaihoan1103@gmail.com • github.com/thaihoandev

Backend Developer with 1+ year of experience engineering scalable APIs and real-time systems in C# and ASP.NET Core. Specialized in AIoT platforms, I leverage Clean Architecture, CQRS, and event-driven design to handle high-throughput telemetry and low-latency video streaming. Proficient in Azure IoT pipelines and Redis-backed architectures, I bring a strong analytical approach to diagnosing complex issues end-to-end—from the API layer down to firmware behavior.

TECHNICAL SKILLS

Languages:	C# (Proficient), Java, JavaScript
Frameworks:	ASP.NET Core (.NET 10), MediatR, EF Core, Spring Boot, ReactJS
Databases & Messaging:	PostgreSQL, MySQL, Redis, Azure EventHub/Service Bus, MQTT
Cloud & IoT:	Azure IoT Hub, Azure Blob Storage, Streaming Protocols, MediaMTX
Architecture & Tools:	Clean Architecture, CQRS, JWT/RBAC, Docker, Nginx, Git

PROFESSIONAL EXPERIENCE

Backend Developer

Nov 2025 – Present

Mebisoft JSC | Ho Chi Minh City

- Contributed to MebiOne, an IoT SaaS aquaculture platform built on a Modular Clean Architecture and CQRS (ASP.NET Core 8, PostgreSQL) - delivering 80+ REST APIs with JWT/RBAC authorization.
- Developed a scalable Azure IoT pipeline processing 40K+ events/day, leveraging Redis distributed locks and BackgroundService workers for concurrent device orchestration.
- Engineered a low-latency video pipeline (RTSP - MediaMTX - HLS/WebRTC) supporting 70+ concurrent cameras with zero packet loss.
- Automated vehicle in/out weighing workflows by integrating AI vision APIs (license plate/weight OCR, material classification), featuring a confidence-based manual fallback mechanism.
- Designed and implemented an end-to-end warehouse management module for receiving, dispatch, and stocktaking, featuring automated cost allocation to ensure strict inventory traceability.
- Collaborate within a cross-functional team operating under the Agile model, participating in sprint planning, code reviews, and technical design discussions within a bi-weekly release cycle.

Backend Developer Intern

Aug 2025 – Nov 2025

Viettel Post | Ho Chi Minh City

- Developed 8+ RESTful APIs for logistics and warehouse management workflows.
- Integrated iGas and MISA to automate e-invoice generation and submission.
- Built an asynchronous Celery + message broker pipeline, reducing invoice processing time.
- Implemented web scraping and structured parsing for invoices across inconsistent templates.
- Collaborated with QA/Product on requirements, test cases, and integration validation.
- Gained hands-on experience with production logistics systems, API design, debugging, and asynchronous processing.

PROJECTS & LEARNING

KKUN Quiz Platform - Personal Project

Jun 2025 – Sep 2025

Github

- **Tech stack:** Java, Spring Boot, Redis, WebSockets, React
- Engineered a real-time, event-driven quiz engine using Spring Boot and WebSockets, facilitating sub-second synchronization of live questions and answer submissions across concurrent clients.
- Decoupled question delivery from answer processing using Redis Pub/Sub to ensure reliable system scaling and prevent bottlenecks during high-traffic quiz sessions.
- Optimized leaderboard computations and session states by leveraging Redis caching, significantly reducing database load and maintaining responsive score tracking.
- Developed the end-to-end interactive gameplay experience, integrating secure JWT-authenticated REST APIs with a dynamic React frontend.

EDUCATION

HCMC University of Technology

Oct 2025

Bachelor of Software Engineering

- GPA: 3.3/4.0
