

NGÔ THÁI HOÀN

BACKEND DEVELOPER | C# · ASP.NET CORE

Ho Chi Minh City · +84 916 491 863 · ngothaihoan1103@gmail.com · github.com/thaihoandev

Backend Developer with 1+ year of experience building scalable APIs and real-time systems using C# and ASP.NET Core. Experienced in AIoT platforms, telemetry processing, and video streaming systems, with strong knowledge of Clean Architecture, CQRS, caching, and event-driven design.

TECHNICAL SKILLS

Languages:	C# (Expert), Java, Python, JavaScript
Frameworks:	ASP.NET Core (10), Spring Boot, Flask, ReactJS
Databases & Cache:	PostgreSQL, MySQL, Redis
Architecture Patterns	Clean Architecture, CQRS, Event-Driven Design, RESTful APIs
Security & Tools	JWT, RBAC, Docker, Nginx, Git, Gitlab

PROFESSIONAL EXPERIENCE

Backend Developer | Mebisoft JSC, Ho Chi Minh City Dec 2025 – Present

- Architected 80+ production REST APIs for device management, telemetry ingestion, and warehouse operations, processing 40K+ telemetry events/day with sub-second response times.
- Optimized PostgreSQL queries with indexing & Redis caching, cutting API latency by 45% and database load by 40% for real-time operations.
- Built low-latency video streaming pipeline (RTSP/WebRTC/HLS) supporting 50 concurrent camera streams with zero packet loss for real-time monitoring.
- Developed warehouse management module covering goods receiving, dispatch, and stocktaking workflows.
- Applied Clean Architecture + CQRS, implemented JWT + RBAC security across 200+ endpoints, and ran 2-week Agile sprints with CI/CD automation.

Backend Developer Intern | Viettel Logistics, Ho Chi Minh City Aug 2025 – Nov 2025

- Developed 8+ Flask APIs for logistics management; integrated external services (iGas, MISA) enabling automated e-invoice processing
- Built asynchronous pipeline using Celery for background job processing, reducing manual invoice work by ~60%
- Implemented invoice extraction using BeautifulSoup web scraping and BeautifulSoup data parsing
- Collaborated with QA and product teams on requirements clarification, testing workflows, and system integration validation

PROJECTS & LEARNING

KKUN Quiz Platform | Personal Project | [Github](#) Jun 2025 – Sep 2025

- Designed event-driven real-time quiz platform using Apache Kafka for asynchronous event processing supporting concurrent users with low interaction latency
- Implemented Redis-based caching to cut database queries by ~40%, resulting in faster response times and improved system scalability
- Optimized PostgreSQL with indexing & query tuning for efficient real-time data access and leaderboard operations
- Built secure REST APIs with JWT authentication and reactive React frontend for real-time quiz interactions and score tracking

EDUCATION

HCMC University of Technology

Oct 2025

Bachelor of Software Engineering

- GPA: 3.3/4.0

CORE COMPETENCIES

- Real-time Systems & Event-Driven Architecture
- Scalable Backend Design & Performance Optimization
- API Design, Security (JWT/RBAC), Database Optimization
- Team Collaboration, Agile/Scrum, Problem-Solving & Debugging
