

NGÔ THÁI HOÀN

BACKEND DEVELOPER | C# · ASP.NET CORE

Ho Chi Minh City · +84 916 491 863 · ngothaihoan1103@gmail.com · github.com/thaihoandev

Backend Developer with 1+ year of experience designing scalable APIs and real-time systems in C# and ASP.NET Core. Specialized in AIoT platforms — telemetry processing, device orchestration, and video streaming — applying Clean Architecture, CQRS, and event-driven design to build reliable, high-throughput backend systems.

TECHNICAL SKILLS

Languages:	C# (Expert), Java, Python, JavaScript
Frameworks:	ASP.NET Core (.NET 10), MediatR, EF Core, Spring Boot, Flask, ReactJS
Databases & Messaging:	PostgreSQL, MySQL, Redis, Kafka, Azure EventHub/Service Bus, MQTT
Cloud & IoT:	Azure IoT Hub, Azure Blob Storage, Streaming Protocols, MediaMTX
Architecture & Tools:	Clean Architecture, CQRS, JWT/RBAC, Docker, Nginx, Git

PROFESSIONAL EXPERIENCE

Backend Developer | Mebisoft JSC, Ho Chi Minh City Dec 2025 – Present

- Architected 80+ REST APIs for device management, telemetry, and warehouse operations, handling 40K+ events/day with sub-second latency.
- Built BackgroundService device orchestration workers with Redis state tracking, integrated with Azure IoT Hub Direct Methods.
- Developed low-latency video streaming pipeline (RTSP/WebRTC/HLS) supporting 70 concurrent streams, zero packet loss.
- Built warehouse management module for receiving, dispatch, and stocktaking.
- Applied Clean Architecture + CQRS with JWT/RBAC security.

Backend Developer Intern | Viettel Logistics, Ho Chi Minh City Aug 2025 – Nov 2025

- Developed 8+ Flask APIs for logistics management; integrated external services (iGas, MISA) for automated e-invoice processing.
- Built an asynchronous job pipeline with Celery, reducing manual invoice processing by ~60%.
- Implemented invoice data extraction via web scraping and structured parsing.
- Collaborated with QA and product teams on requirements clarification, testing, and system integration validation.

PROJECTS & LEARNING

KKUN Quiz Platform | Personal Project | [Github](#) Jun 2025 – Sep 2025

- Designed an event-driven quiz engine using Kafka to broadcast live questions and process answer submissions in real time.
- Implemented Redis caching for leaderboard/session data, cutting database queries by ~40%.
- Implemented WebSocket-based live updates for synchronized question delivery and score tracking across clients.
- Built secure REST APIs (JWT) with React frontend for real-time score updates and quiz interaction.

EDUCATION

HCMC University of Technology

Oct 2025

Bachelor of Software Engineering

- GPA: 3.3/4.0
